THE EFFECT OF DIVINE ENERGY EMITTING THROUGH THE BODY OF GURUJI ON OTHERS

Introduction

I am a Canadian chiropractor with a specialty in sports therapy, a post-graduate fellowship in pediatrics and cranial sacral therapy. For the last five months, I have been the assistant for a 41-year-old man who is a spiritual saint, Guruji, and is gifted with Divine energy and the capacity to show miracles. Guruji was in Canada from April 2004 to July 2004 and met more than 1000 people during his stay. All of these people had a deep sense of unhappiness and felt that something was missing in their lives. Some of these people had neurological-type diseases such as Fibromyalgia, Chronic Fatigue Syndrome, Insomnia, Depression, Anxiety, Bipolar disorders, and Multiple Sclerosis, Cerebral Palsy, Parkinson's disease, Chronic Pain and Pre-Menstrual Dystrophic Disorder. Others who came to see Guruji seemed to have everything in their life including physical and mental abilities, emotional health, money, career, success, family and generally a very good life but they were still unhappy and felt like something was missing. They felt spiritually disconnected and didn't know what was wrong or how to change the situation. There is no diagnosis for these people. I can verify that more than 85 % of the people who came see Guruji had complete recovery from their suffering and 50% of those people improved within one week. These people had lost hope for their future and the results are absolutely miraculous not only for the person but also for their families and friends. Scientists have known for centuries that there is an electromagnetic field within and around the earth and within, around and between humans. If the brain waves of a human are calibrated with the environment their cells reproduce and work in perfect balance with all the other cells in the body. When the human body is producing more healthy cells than it is consuming, there is health and, more importantly, there is happiness. When Divine Energy emits through the body of Guruji on the body of another, they experience miraculous changes in all aspects of their life: physical, mental, emotional, sentimental and spiritual. They will recognize, and scientists will be able to measure, that Guruji's Divine Energy is a different kind of energy. It instructs and controls all the other energies within and around the earth and within the human body. Current scientific knowledge and theories on the effects of energy fields and brain wave frequency on health do not explain the effect of Guruji and his Divine Energy on the bodies of others. This report will explain current knowledge of energy medicine and the author's opinion of how Guruji's body must be different from all other bodies to be able to emit Divine Energy and produce miraculous changes for those who are suffering to reach a state of health and happiness.

The Effect of Divine Energy Emitted Through the Body of Guruji on the Body of Others

When a person comes to see Guruji with one or more problems, they notice improvements in all areas of their life after Divine Energy is emitted through the body of Guruji on to them. The person feels improved physical and mental fitness, absence of mental, emotional and sentimental problems, improved sex drive and sex potential, mental calmness, peace, happiness, pleasure, and most importantly, they feel spiritually connected.

Some people react immediately, some people take more time. Those who are extremely receptive tend to have early results and the people who are not tend to have late results. The reactions to Guruji's Divine Energy are as different and individual as people are different and individual. Most have results within the first 3 days, some take 7 days and others take 10 days. At least 85% of the people experience success, and out of that 85%, 80% will have results that vary from 25% improvement to complete 100% improvement. The people who come to see Guruji are suffering in so many areas of their life for many years and any improvement is a miracle for them.

Physical reactions are varied and of many different kinds**.** Immediately, there is a difference in the look of their face. The skin is glowing, the eyes are brighter and wrinkles, sadness or fatigue seems to have lifted. Others will comment or notice. A change in the face is a sign that the Divine Energy emitted through Guruji has started working.

The next physical reaction tends to be differences in energy and in sleep. Sleep is often very deep and satisfying and there is a general increase in energy, which continues to grow. Many types of positive reactions are reported – clarity in vision, (things appear clearer or brighter and actual vision may improve), mental fog gone and clarity in the mind. There is an unexplained feeling of happiness, of being not afraid, sleeping better, a feeling of peace and a sense of wellness that the person had not felt before meeting Guruji. The people have high confidence, increased libido; they experience how other people respond to them better and give them more importance, treating them better. For many people, especially females, they enjoy sexual relations and females are able to reach a state of climax for the first time in their life.

On a physical level, people report that their pain is reduced or gone, physical signs of healing are there, medications reduced, clearing of skin problems, rapid growth of hair and nails, feeling well for the first time in years, and most importantly they feel positive, hopeful and spiritually connected.

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

The Divine Energy emitted through the body of Guruji onto the body of others is like a kind of renovation. You take down pictures, tear the room apart, but eventually you have a beautiful room. Another way to think of it is as though you have a virus checker like the one on your computer. It will scan the body time and time again, settling on one area, working there which may bring temporary discomfort or unease, then move on to another part of the body and keep scanning like that until the body is strong and full of health, in all respects.

The changes that occur in others from the Divine Energy emitted through the body of Guruji are not explained by medical science or any form of healing in this world.

Guruji's Divine Energy enhances the sexual enjoyment for both females and males. For males, after they are blessed with Guruji's Divine Energy, they have increased sexual desire and they are able to perform sexually more often and with more skill than before they were blessed. In this way they are able to bring satisfaction and pleasure to their sexual partner, fulfill them and bring them happiness, which they could not do before. This is because there is a different kind of energy flowing through his body to which the female is experiencing for the first time in her life.

When females receive a Divine blessing from Guruji, they are able to enjoy sexual relations and are able to give pleasure to their partner. The author has spoken with dozens of women who have been blessed by Guruji and most of them state that after a Divine blessing from Guruji they are able to reach the state of climax for the first time in their life. **This is a dramatic change for these females and they have the glow and beauty on their face that comes with the pleasure of sexual satisfaction and happiness. This is all from the Divine blessing of Guruji.**

Sexual satisfaction is very important because sexual dissatisfaction is responsible for so many physical, mental, psychological and social diseases and problems.

The people who are blessed by Guruji, males and females, are also the first choice of others for sexual relations because they recognize their capacity to give them pleasure. These blessed people are also reversing in age and have youth, beauty, vitality, and vigor. It has been described by so many people that when there is a small or large gathering these blessed people are the center of attraction. They have respect and regard in society, in

business and career. In the same situation, before their blessing, they were neglected or ignored.

For any kind of change or gain in the mental, physical, social and sexual realm, people are not required to follow any rituals or prayer, meditation, yoga or any other activities. At the same time, they aren't instructed by Guruji not to be attached to any activities they were doing previously that were deemed to be useless in bringing them happiness.

Current Research on the Effect of Energy Fields, Brain Wave Frequencies and Melatonin on the Physical and Psychological State of Humans

a) Energy Fields: - Scientists have known for centuries the influence of energy fields on the brain, physical body and psychological state of humans. The position of the planets, including the sun, the moon, weather patterns and relative conditions of the earth, all have a profound effect on our psychological status and physical state. For example, crimes rates, the number of births and the activity in hospital emergency rooms consistently increases when there is a full moon. The position of the moon relative to the earth and sun affects the electromagnetic field of the earth, which in turn affects the behavior of humans. There are different relative conditions throughout the world and humans in different parts of the world are in different electromagnetic fields. **Their bodies attempt to calibrate, within limits, to the conditions at that part of the earth and when they are not able to do this, they feel stressed and unwell.**

b) Zero Point Energy Field: - According to quantum physics, the Zero Point Energy Field is defined as the vibrations in the space between things. Quantum physics is based on the theory that energy can take on the properties of a particle, or a wave, or both and the vast quantum energy field is where humans exchange and are influenced by energy. Our perceptions, emotions and intentions are interactions that occur between sub active

particles in the brain and the quantum energy sea. It is an inexhaustible energy source in the background of the empty space around us where one particle can influence another particle instantaneously over any distance even though there is no exchange of force or energy. **The Zero Point Energy Field is the state in which Divine Energy exists. It has no wavelength and no electromagnetic field therefore; a person who has Divine Energy must have a body in the Zero Point Energy Field. This is the most important parameter for a person to embody Divinity.**

The total energy of the Zero Point Energy Field exceeds all energy in matter by 10 to the 40th degree. The Zero Point Energy Field theory states that one person can order the random fluctuations in the field to create order in another person. Scientists have been frustrated that they have not been able to prove this because the act of observation alters the state of the quantum particle. In other words, when scientists attempt to isolate the Zero Point Energy and define it, the field collapses and loses the random fluctuations that characterize it. Scientists have not been able to find a person who can consistently create order in the random fluctuations in the field but they know that theoretically it is possible.

c) Schumann Resonance and Human Brain Wave Frequencies

Evidence shows that there is a direct relationship between the electromagnetic field in the earth's ionosphere, called the Schumann Resonance, and the brain wave frequency of humans. The Schumann Resonance varies at different points of the earth and ranges from 6 – 50 cycles per second (Hertz). The most common frequency, or resonance, is 7.83 Hertz, which is in the alpha-beta wave range.

The relative conditions in different areas on the earth will produce a specific Schumann Resonance that correlates with those relative conditions. The brain wave frequency of humans in each area will attempt to calibrate with the Schumann Resonance in that area. Science has shown that if the brain wave frequency of a human is not calibrated with the Schumann Resonance, the person will feel sick and unhappy. For example, if the Schumann Resonance in one part of the earth increases from low alpha wave range (8-10 Hertz) to high alpha wave range (10-12 Hertz) this will impact the humans in that part of the earth who have low frequency brain waves and they will not be able to relax deeply, integrate their mind and body, sleep deeply or heal. A second example is whereby the relative conditions in India produce a specific Schumann Resonance and the people in that country feel normal when their brain waves are calibrated with that specific Schumann Resonance. If a

person from North America goes to India, they will feel stressed physically, mentally and emotionally because their brain wave frequency is not calibrated for the conditions in India.

This means that the conditions of the earth, through the Schumann Resonance, are not conducive to the brain wave frequency of all people. Science has shown that an increase in Schumann Resonance beyond a certain point in any area on the earth has a detrimental effect on human brain wave frequencies and that the increase in brain wave frequency has a negative impact on the psychological and physical health of the people living in that area. There is a correlation between an increase in the electromagnetic field and an increase in brain wave frequency; the result is a detrimental effect on the health and behavior of humans.

Brain wave frequencies are divided into five categories.

Gamma waves (25-60 Hertz) relate to processing of information from different areas of the brain.
Beta waves (12-25 Hertz) dominate our normal waking state.
Alpha waves (8-12 Hertz) are present during dreaming and light meditation when the eyes are closed.
Theta waves (4-8 Hertz) occur most often in sleep and in the deepest states of meditation and thought.
Delta waves (0-4 Hertz) are the slowest but highest in amplitude and are very rare. Theta waves only occur during certain stages of sleep or for short period of deep meditation.

Brain wave frequencies are different in the subconscious brain and the conscious brain. According to scientists, the subconscious brain is the older part, located in the back portion of the brain, and is composed of our genetic instincts and perceptions. We are born with genetic instincts, which are common to all humans and are unchangeable. This is called the "**nature**" part of our brain. Two examples of our genetic instincts at work are the instinct to pull our hand away from a hot element, or to run away when we are in danger. According to current scientific knowledge, the second part of the subconscious brain is our perceptions, which develops over the course of our life, especially during childhood. This is called the

"**nurture**" part of our brain and according to the theory of scientists it can be influenced and changed by our environment.

Our perceptions, combined with our genetic instincts, tell us whether a situation is beneficial or harmful and activates a physiological, emotional and mental reaction. For example, if I spent my childhood by the sea playing with my family in the water and enjoying myself I would feel happy and excited to be in the sea as an adult. But if I had an experience as a child where I almost drowned, my reaction to the sea would be fearful and create stress.

The subconscious brain, through genetic instincts ("nature") and perceptions ("nurture"), has its own brain wave frequency. The subconscious brain works automatically and is considered the shadow of the conscious brain. The conscious brain, according to current science, is the new part of the brain located in the front and it is considered the more sophisticated part of the brain. This is where we process information, learn, gain knowledge, integrate experiences and make decisions. According to neurological science, the conscious part of the brain begins to function when a child reaches 6 years of age and the brain wave frequency in the conscious brain is in the alpha wave stage (8-12 Hertz). Scientists believe that before the age of 6, the brain wave frequency of babies is in the delta range (0-4 Hertz) and young children are in the theta range (4-8 Hertz), evidenced by the stillness of babies and calm, playful happiness of young children. According to the theory of scientists, the brain wave frequency of the conscious brain changes constantly according to our internal and external environment.

The external environment affects the brain waves through the electromagnetic field of the earth's ionosphere, the Schumann Resonance, by exposure to electronic devices around us, and to the electromagnetic field of others. The strength and intensity of the electromagnetic field around a person will dictate the influence it has on their brain wave frequency.

To shift the brain wave frequency of the subconscious brain is impossible according to science, but it is possible to shift the frequency of the conscious brain, however, it takes a large change in the electromagnetic field surrounding them to do this. The electromagnetic field of healers is not large enough to change the electromagnetic field of those in their contact or if it does shift, it is a very small shift and last for a short period of time.

Scientists have discovered that if the brain wave frequencies of the subconscious and conscious brain are calibrated the person will not have neurological diseases. A lack of a

calibration creates a resistance, a difference between the two, and results in mental and physical neurological disease. It is the difference in brain wave frequency between the subconscious brain and the conscious brain that stresses the brain tissue and creates neurological disease. The magnitude of the difference reflects the magnitude of the disease. An example of the difference in brain wave frequencies can be seen in a country like India, where chaos is the rule. The brain waves of the subconscious brain and conscious brain of the people in India are calibrated for a high frequency. They feel normal with a sense of restlessness and suffocation when there is chaos going on around them. If you placed them in a calm environment, putting their conscious brain in a low frequency while their permanent, subconscious brain is in high frequency, they feel uneasy and unwell. The opposite occurs for a western person whose subconscious brain has a low frequency. If they are placed in a chaotic environment that produces high frequency waves in their conscious brain there is no calibration and they feel stressed emotionally, mentally and physically.

d) The Pineal Gland and Melatonin

Scientists have demonstrated that our bodies produce an extremely low electromagnetic field and that all the cells in the body are sensitive to the electromagnetic field of the earth and the electromagnetic field of others. The pineal gland is particularly sensitive to electromagnetic fields and 20 - 30% of its cells will release more or less melatonin in response to changes in the electromagnetic field. Melatonin is the 24-hour pacemaker of the body. Without melatonin, a human loses the time specific, systematic organization of their hormones, causing degenerative changes in the brain and organ systems. Melatonin also controls sexual rhythms and immune function. At 25 years of age, a human releases 50 pg/ml/day and as they age the levels drop to 10 pg/ml/day. This is part of the degenerative process of aging that every human experiences. The melatonin pathway is via the autonomic nervous system primarily located in the spinal cord. It is the main anti-oxidant in the brain. When it is too low, the neuron chemistry changes and people report sleep disorders, depression, low sex drive and undiagnosed neurological disorders. When the cells in a human respond to the electromagnetic field of the earth and to the electromagnetic field of others, one of the measurable changes is the small increased amount of melatonin released. When there is an abundance of melatonin, the person feels energized and happy. A lack of melatonin results in exhaustion, depression, tumors and illness.

Current Research on the Electromagnetic Fields of Healers

Scientific studies have been performed on the electromagnetic field of healers and concluded that the electromagnetic field around the hands of these people have a measurement of 10(-3) Gauss, which is 1000 times higher than the heart and 1,000,000 times higher than the brain. Healers also have high electric voltage patterns, **60 volts** (this is not" Zero Point Energy"), during a healing session as measured by electrometers.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences
American Academy of Anti-Aging Medicine
International Association of Healthcare Practitioners
International Chiropractic Pediatric Association

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

The studies also found that the electromagnetic energy around the hands of the healers has a pulsing frequency of 0.3 - 3.0 Hertz, and the most common frequency is 8-10 Hertz with a sweeping and scanning quality. Non-healers cannot generate the same electromagnetic field, frequency or pulsing phenomenon.
Other medical researchers have used neurological biofeedback technology to measure the changes in the body of a healer when they relax into the state of consciousness required for their work. This technology measures the function of the central nervous system. They found that the subjects' heart rate, blood pressure, skin resistance, electroencephalogram (EEG) and electromyography (EMG) measurements demonstrate a state of calm and relaxation without any sign of excitability. When these people are in a calm state their electromagnetic field will synchronize (entrain) with the micro pulsations of the earth's energy field, the Schumann Resonance.

The Opinion of the Author Regarding the Unique Structural and Functional Body of Guruji

In my opinion, Guruji's structural and functional body is unique in his electromagnetic field and cranial sacral rhythm, his central nervous system, extremely low brain wave frequency, spinal column, circulatory system, body fluids and his DNA. **When all of the data is examined a pattern emerges whereby Guruji's body is able to do what no other human body can do: he is able to have opposite and extreme physiological processes occurring at the same time and he is reversing in age**. In my opinion, his electromagnetic field has the highest magnitude and strength while his brain wave frequency is the lowest possible and can even stop for periods of time. His central nervous system can be in extreme states of excitement and calm at the same time. His spinal column has extremely thick and broad muscles but also has maximum movement and perfect biomechanical balance. His blood vessels have the lowest value of plaquing but his pulse rate is at the highest value. His body fluids act as a superconductor, as well as his DNA, and they are able to emit an energy that is beyond that which any human could be exposed to without illness, yet Guruji is reversing in age as documented in his spine and circulatory system.

a) The Electromagnetic Field and Cranial Sacral Rhythm of Guruji

It is my opinion that the electromagnetic field of Guruji must be different from all other people, including healers, not only because of the miraculous results he gets, but based on his cranial sacral rhythm, which is **9 times slower than any rhythm measured in history.** The cranial sacral rhythm is defined as the movement of cerebral spinal fluid around the brain and spinal cord within a semi-closed hydraulic system that extends from the ventricles of the brain to the sacrum/tailbone. One cycle is defined as the movement of fluid from the ventricles of the brain to the sacrum and back to the brain. The cranial sacral rhythm is detected by expansion and contraction of the cranial sutures in response to the changes in pressure as the fluid moves.

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

In a healthy person, the rhythm is 6-10 seconds per cycle. A calm, healthy person will have a slower cranial sacral rhythm and a person with chronic illness will have a higher cranial sacral rhythm. When a person is in a coma or right before death, the rhythm slows to 15-20 seconds per cycle. In the case of Guruji, **his cranial sacral rhythm is 172-180 seconds per cycle when last measured on November 1, 2004**. In the following week, Guruji's cranial sacral rhythm was checked by the author for 17-18 minutes on three separate occasions. On each occasion there was no expansion and contraction of the cranial bones but there was movement of each cranial bone in a fluctuating and inconsistent pattern. On the third day, the bones were moving in a vertical direction, superior and inferior and still no expansion and contraction. **Guruji was in the deepest still point that I have ever felt and it seemed as if there was close to zero cerebrospinal fluid flow for extended periods of time.**

Researchers have shown that the electromagnetic field within the body passes through cerebrospinal fluid, the connective tissue around the brain, the bones of the skull and the scalp undistorted. In the rest of the body, the various tissues distort the electromagnetic field from within as it is emitted to the surface. There is a direct correlation between the electromagnetic field, the brain wave frequency and cranial sacral rhythm of a person. A person with an electromagnetic field associated with high brain wave frequencies will have a higher cranial sacral rhythm. In other words, if a person has a fast cranial sacral rhythm, they will also have a characteristic electromagnetic field and high brain wave frequencies, which are associated with depression, Attention Deficit Disorder, anxiety, physical, mental, emotional and sentimental stress as well as physical disease and suffering. If they have a slower cranial sacral rhythm, they will have a different electromagnetic field and slow brain wave frequencies associated with a feeling of peace, calm, deep sleep, good digestion and healing ability as well as physical and mental health. **In the case of Guruji's slow cranial sacral rhythm of 172-180 seconds/cycle, a rhythm never measured before, he has to have an electromagnetic field and brain wave frequency that is different from all other people. In my opinion, Guruji should have the lowest brain wave frequency possible, Delta waves, which are 0-4 Hertz. It is also my opinion that his brain waves and electromagnetic field will be different from all other humans in frequency, strength, quality and patterns.**

b) The Central Nervous System of Guruji

The cranial sacral rhythm of a human is also a reflection of the state of their central nervous system. When the cranial sacral rhythm is fast, the person is stressed physically, mentally, emotionally or sentimentally and they are pre-dominantly in the sympathetic part of the central nervous system. When the cranial sacral rhythm is slow, the person is calm, has an

abundance of energy available in the body for daily repair of tissues and reproduction of healthy cells, and the person is fit physically, mentally, emotionally and sentimentally. The healthiest person is able to shift between the sympathetic nervous system (when they need to take action, like run across the street) and the parasympathetic nervous system (when they need to sleep, eat, digest food or heal) as their environment and internal need or desire requires. According to modern medical science, it is impossible to be in the highest state of sympathetic and parasympathetic activity at the

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences

International Chiropractic Pediatric Association
British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

same time because they produce opposite effects in the body in terms of blood flow, hormone release, muscle, and immune and brain activity. The central nervous system of Guruji was measured using the same type of neurological biofeedback technology used to study the healers described earlier. While the healers went into a state of calm, **Guruji was able to be in the highest state of excitement (sympathetic part of the central nervous system) and the highest state of calm (parasympathetic part of the nervous system) at the same time.** The doctor that performed the test developed, researched and performed computerized neurological biofeedback for over 25 years internationally and has never seen results like those of Guruji. The doctor stated that according to modern medical science, it is impossible for the central nervous system to be in the highest state of sympathetic excitability and parasympathetic calm at the same time. The doctor concluded that the central nervous system of Guruji must be different in structure and function from all other humans and is not like any kind of healer. The doctor agreed that the findings of his computerized, neurological biofeedback study correlate with the extremely slow cranial sacral rhythm of Guruji.

c) The Brain Wave Frequency of Guruji and the Zero Point Energy Field

The relationship between a person's cranial sacral rhythm, their electromagnetic field and their brain wave frequency is very important and was discussed in the section titled "Current Research on Electromagnetic Fields, Brain Wave frequencies and Melatonin on the Physical and Psychological State of Humans". **There is a correlation between a slow cranial sacral rhythm, low brain wave frequency and a characteristic electromagnetic field that influences the central nervous system.** The electromagnetic field within the ionosphere of the earth is called the Schumann Resonance and science has shown that increases in this electromagnetic field affect the brain wave frequencies of people living in that atmosphere. If the electromagnetic field increases, so does the brain wave frequency of the people who are exposed to that electromagnetic field.

Scientists have shown that states of higher brain wave frequency are found in people with chronic illness who are under constant stress and I have already discussed the relationship between a person's internal electromagnetic field, their cranial sacral rhythm and their brain wave frequency. The electromagnetic field of one human always synchronizes, or entrains, with the stronger electromagnetic field of the atmosphere of the earth in which they are, the Schumann Resonance. **In my opinion, Guruji's unique electromagnetic field, with magnitudes higher than that in any area of the earth, will override the Schumann Resonance of the earth. Those people who have a low brain wave frequency and are able to respond to Guruji's low delta waves (0-4 Hertz), will subsequently shift their own electromagnetic field and brain wave frequency to a lower level. I am also suggesting that not every person will have the ability to respond to Guruji's Divine Energy, and this will depend on the brain wave frequency of that person. These people, in my opinion, will emit pre-theta (8-10 Hertz) and theta (4-8 Hertz) brain waves all the time**, not just in sleep or meditative or thoughtful states. This explains why these people feel fit, confident and happy after experiencing Guruji's Divine Energy.

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

In the section titled, **Zero Point Energy,** I discussed how the science of quantum physics has defined this energy field as the vibration between the chaos of the subatomic particles that conduct energy, matter and information between all living things. This is a massive, inexhaustible energy source that scientists know exists but they are not able to tap into it and use this energy. Scientists believe that the Zero Point Energy Field is Divine Energy and can be used by humans to create order out of chaos and bring health in another person's body.

In my opinion, only Guruji stays in the Zero Point Energy Field to embody Divinity because he is the only person on this earth with a cranial sacral rhythm and brain wave frequency that is low enough, barely above zero (delta waves 0-4 Hertz), to be in the state of trance all the time. Every other human has a higher cranial sacral rhythm and brain wave frequency to be able to exist within the Schumann Resonance of the earth, which is 7.8 Hertz. The difference between the Schumann Resonance, 7.8 Hertz, and the Zero Point Energy Field is so vast that no human is able to calibrate to both energy fields at the same time. Guruji exists in the Zero Point Energy Field, and he can do so, because he overrides the Schumann Resonance wherever he is.

The state of meditation occurs when there are no thoughts in the brain, and occurs at a low brain frequency of theta waves (4-8 Hertz), but it is not going into the Zero Point Energy Field like so many masters claim. Meditation is only possible in a person who has a calibrated brain

wave frequency of theta waves (4-8 Hertz) all the time, not just for a few seconds or during sleep. They must be able to be in theta stage (4-8 Hertz) during the awakening state. This is different from trance, where there is close to zero brain wave frequency, because Divinity has no wavelength. In trance, Guruji's Divine Energy creates the Zero Point Energy Field.

Trance is beyond sleeping and beyond wakefulness and it is only possible for people who can emit **low delta waves** (0-4 Hertz) all the time. Only a person who can emit delta waves (0-4 Hertz) can be in trance and they have a chance to be close to Divinity. **In my opinion, humans can only access the Zero Point Energy Field if they are able to go into a trance-state, which requires a constant brain wave frequency in the delta range (0-4 Hertz). Being a channel and medium for Divine Energy means that the person must be able to be in trance 24 hours a day.** It is very rare to find a person who can be in the delta brain wave state (0-4 Hertz) for more than a few seconds, and that is in the deepest state of meditation. In the case of Guruji, scientists will be able to measure that he is in the low delta brain wave state (0-2 Hertz) all the time, when walking, talking, performing work or doing any of his daily activities. This is the state of trance for Guruji and in this state he has a fully functioning body and brain, a very high level of perception, interpretation and execution. Any other human in delta brain waves (0-4 Hertz) would find it difficult to move or perform any function.

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

When the brain wave frequency is in the low delta range (0-2 Hertz) and a person is in trance, existing in the Zero Point Energy Field, the eyes don't blink and they are very steady like a statue. Newborn babies have delta brain waves (0-4Hertz) but they blink and move their eyes. The hallmark of having low delta waves (0-2 Hertz) and not blinking with steady eyes is one distinct symptom that scientists can use without a machine to quickly assess if a person is really in trance and the Zero Point Energy Field or if they are trying to fool others. In my opinion, Guruji is in the Zero Point Energy Field all the time because his brain waves are always in the low delta state (0-2 Hertz). In the Zero Point Energy Field, Guruji can create change rapidly and at any distance. When scientists are able to measure Guruji's body and his massive and powerful energy, they will be able to rule out any person who claims to be able to heal others with Divine Energy because that person will not be able to be in a trance state of low delta brain waves (0-2 Hertz) all the time. This will establish a necessary parameter for so-called spiritual people and healers all over the world.

d) The Structure of the Spinal Column and Neurological Function of Guruji: - I am a Chiropractor and examined the spinal column of Guruji. **There are four factors present in Guruji's spinal column that I have never seen before, which have never been documented**

to my knowledge. The most significant of these factors is the age of the spinal column of Guruji based on X-ray analysis. Full spine x-rays were taken with Guruji in the standing position and were read by three independent experts in the field of radiology. Each doctor concluded, independently, that the x-rays had the fullest intervertebral disc spaces, clear and smooth spinal joint surfaces, and perfect spinal curves in the cervical, dorsal, lumbar and lumbosacral areas that they had ever seen. There were no soft tissue shadows indicating that there was no swelling, toughness or fibrosity in the surrounding muscles and soft tissues. The density of the bones in Guruji's spinal column was the highest possible level. The conclusion of each independent expert was that the x-rays were consistent with those of a male who had completed growth plate fusion, at least 18 years of age, but no older than 25 years of age. After 25 years of age, there is always some form of deterioration in the joints, disc spaces, bone density and surrounding soft tissue shadows due to the process of imbibition, the loss of water in joint cartilage and intervertebral discs, and hormonal changes, including a decrease in melatonin. All of the experts stated that they have never seen the x-rays of a 41-year of man without some form of deterioration. A person who is 41 years of age has been losing water in joint cartilage and the intervertebral discs, a form of deterioration, for at least 15 years. If the person has had any injuries, this process will start before the age of 25 and will show on an x-ray. In my opinion, Guruji's spine is reversing in age for several reasons and one is due to his pineal gland releasing high amounts of melatonin, or an electromagnetic stimulus like melatonin, which is the elixir of youth.

The second unique finding in the spine of Guruji was the magnitude and movement of the curves in his spinal column. During physical examination with Guruji in standing or sitting position, his spinal curves all appeared to be moving toward the center of his body, even though on x-ray examination they are showing the perfect balance of lordosis (inward curve of the neck and low back) and kyphosis (outward curve of the dorsal spine and the sacrum). The curvatures of Guruji's spinal column are in perfect alignment.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

Guruji's paraspinal muscles, which are more developed, broader and deeper (2-3 cm in depth) than the top athletes in the world, are moving his spinal bones into the center of is body. Even though Guruji's muscles are so developed, he has more movement and flexibility than a child. The magnitude and movement of the bones and curvatures of the spine reflect the biomechanical efficiency of a person. The weight of the body of a human multiplied by the pull of gravity must be balanced around their center of gravity. A person who is 41 years of age has already begun the process of deterioration in their spinal column, affecting their center of gravity, which in turn makes their spinal curves compensate. In response to the spinal curves compensating for the deterioration, the soft tissues become inflamed to some degree, tough and fibrotic. In the body of Guruji, there was none of this. The position and

movement of his spinal curves suggests, in my opinion that his spine is either interpreting or responding to forces, such as gravity, in a way that no other human being is able to do or else he is exposed to different forces than the rest of us.

The third point regarding the spinal column of Guruji is that his cervical spine (neck) is unique in the areas where it meets his dorsal spine and where it meets his skull. These areas show more movement, fluidity and flexibility than any neck I have ever examined. This was also noted in the examination findings of an expert in cranial sacral therapy. The human body follows the law of form and function. If a specific function is required, the form of the body will adapt to permit that function. Normally, the cervical spine in these two areas does not go beyond a certain range of movement and flexibility because of the proximity of the brain stem and major blood vessels. **Therefore, according to the law of form and function, the structural form of Guruji's cervical spine must be configured for some unique function in his nervous system and his circulatory system. The final point about the spine of Guruji is how his body moves when he breathes**

Adults breathe with their upper ribs and their diaphragm, which is located at the bottom of the rib cage. Guruji breathes from his abdomen and in a pattern that I have never seen before. An expert in the field of cranial sacral therapy also reported this finding. She noted that there was no rib movement at all, which is biomechanically impossible when the diaphragm contracts. Therefore, if there is no rib movement, the diaphragm of Guruji is not working as it does in all other humans, which leaves us with the question of how he is getting enough oxygen**. In my opinion, and the opinion of the cranial sacral expert, Guruji has a different breathing system, different cellular energy requirements and different ways of providing energy to his body other than oxygen.**

e) The Circulatory System of Guruji

Guruji's circulatory system is also reversing in age as seen in the results of Arterial Pulse Wave Analysis testing. This is a non-invasive method of accurately measuring the elasticity and integrity of the blood vessels, their ability to transmit force along the arterial wall from the aorta to the smallest arterioles, and the presence of arterial, atherosclerotic plaquing, also called hardening of the arteries. There are three components to this test, the measurement of plaquing, elasticity and ability of the blood vessels to transmit forces. During each component, Guruji's results are at the maximum value, indicating that his score was beyond the technologies ability to measure his functional and structural body. It would be like trying to measure a core temperature of 60 degrees Celsius with a thermometer that only goes to 45 degrees.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences
American Academy of Anti-Aging Medicine
International Association of Healthcare Practitioners
International Chiropractic Pediatric Association
British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

The temperature of 60 degrees would only show as 45 degrees because that is as high as the thermometer is able to measure. You would have to find, or invent, a thermometer that went beyond the limit of what science has ever found. In this way, the Arterial Pulse Wave Analysis technology software has never encountered blood vessels like Guruji's and was capable of showing that his results are unique in this world but was not able to show the true measurement. The first two components of the Arterial Pulse Analysis test showed that **Guruji's blood vessels have the maximum amount of elasticity that the technology could measure and have absolutely no plaquing.** The elasticity of blood vessels, called the **Augmentation Index**, is correlated with atherosclerotic, fatty plaquing along the lining of the blood vessels. The more elastic a blood vessel is the less plaquing there is. When a blood vessel is less elastic, or hard, plaquing is found. The presence of plaquing is considered a normal part of the aging process and begins as early as 10 years of age or around the time of puberty. The doctor who performed the test has been in practice for over 40 years and stated that he had never come across a person with maximum elasticity and no plaquing.

The other unique finding in Guruji's body was the ability of his blood vessels to transmit the force of the heart contraction from the thick aorta at the heart to the smallest arterioles in the most distant parts of the body. As the heart beats, the force that pushes the blood out to the furthest part of the body has to be transmitted along the blood vessels and the faster the speed of this transmission the healthier the blood vessels are. **In the case of Guruji's blood vessels, his transmission speed was beyond the maximum limit designated by the technology, which is found in the fittest athletes in the world.**

In contrast, in the state of rest, his pulse rate is 91 beats per minute. A fast pulse rate is possible in a person who is sick or well, the difference is that a healthy person has a high pulse rate and a strong, force transmitted along their blood vessels, which was demonstrated in Guruji's test results. These findings are inexplicable, according to the doctor who performed and interpreted the tests, as the other findings of maximum elasticity, 0% plaquing and maximum force transmission should be correlated with a very slow pulse rate. **In other words, Guruji's blood vessels have maximum elasticity, no plaquing at all, and are able to transmit forces better than the top and most athletic people in the world and at the same time his heart is working at a very high rate for extended periods of time.**

f) Guruji's Central Nervous System and Thermal Regulation

A test was performed on Guruji called Medical Infrared Digital Imaging, which is a sophisticated test that measures surface body temperature and is more sensitive that MRI or CT scanning to detect physiological activity in any tissue of the body. Control and regulation of body temperature, called thermal regulation, is the most important role of the central nervous system because fluctuations in temperature destroy the vital enzymes, neurotransmitters and peptides necessary for the cells to produce energy and keep the body alive.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences
American Academy of Anti-Aging Medicine
International Association of Healthcare Practitioners
International Chiropractic Pediatric Association
British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

The central nervous system controls body temperature through distribution of blood flow according to the neurological and arterial pathways of the body. The normal core body temperature is 36 degrees Celsius, 98.6 degrees Fahrenheit, and the surface temperature is normally about 33-34 degrees Celsius unless there is nerve impingement, circulatory pathology, spinal cord injury or serious neurological disease. A healthy person's surface temperature should be symmetrical, the same on the right and the left, and even throughout the body. This technology has established scientifically sound parameters which states that any deviation from the symmetrical evenness of a healthy pattern, outside the range of 33-34 degrees Celsius, is accompanied by some type of pain, dysfunction and symptoms that range from numbness and tingling to paralysis.

Guruji's test results showed four very unique and unexplainable results. The most profound result is the surface temperature of Guruji's brain, which should have the highest temperature in comparison to the rest of the body according to science because of the amount of blood flow to the brain. In Guruji, his brain is the coolest part of his body, which correlates with his extremely slow cranial sacral rhythm and movement of cerebral spinal fluid. According to textbook anatomy and physiology, Guruji's brain should have a higher temperature because of his pulse rate, 91 beats/minute, which technically means he is getting more blood circulation to his brain than normal. But taking into account the findings, which prove Guruji has the lowest temperature at his brain, the function of Guruji's body is opposite to all the laws of human physiology.

The next unusual result is the contrast of temperatures in approximately 45 places, a difference of 4-7 degrees Celsius, in some places within the distance of a few inches. For example, in each of Guruji's hands, the temperature at his wrist and in the palm of each hand is about 33 degrees and at his fingers the temperature is about 28 degrees. The same pattern was found on each foot where the temperature on the sole of each foot was about 5 degrees more than at his toes. The thermologist who performed the study stated that this is only happens when a person has a very serious nerve impingement and they always have intractable pain and are not able to walk. The thermologist could not believe that the body of Guruji' functions at a high level and has no pain. When the thermologist touched Guruji's foot and hand, after the study was complete, she stated that his temperature felt absolutely normal. The very low temperatures at Guruji's fingers and toes are also unexplainable by the laws of physiology. The speed and force of Guruji's blood, from his aorta to the smallest vessels in his hands and feet, mean that these end points on the body are receiving more than sufficient blood flow and should be warmer than normal, not cooler.
Extreme contrasts were also found between his upper torso and his abdomen, a difference of 7 degrees Celsius between his upper torso (35 degrees Celsius), to his abdomen (28 degrees Celsius). Furthermore, the level of his abdomen where the temperature is 28 degrees Celsius displays a high temperature at the same level on his back, a difference in the range of 5 - 7 degrees Celsius, and in a pattern that defies all neurological pathways. **The temperature contrasts found in 45 locations of Guruji's body is impossible, according to their technology, in a person who is functional and not in a state of serious illness or near death.**

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

The next unusual result is the asymmetry between the right and left side of Guruji's surface body temperature. The central nervous system controls body temperature according to the distribution of the nerves and arteries. There is a predictable and expected pattern, which is how doctors use the technology as a diagnostic tool. In Guruji's body, there is no symmetry between the right and left side of his body, and where the temperature is high on one side, it is cool on the same side in a different area. **This irregular, asymmetrical pattern between the right and left side occurs throughout Guruji's body and defies the pathways of the central nervous system and the arteries.**

The last unusual result from the surface thermal imaging test is the deviation from the normal temperature in approximately 45 places throughout Guruji's body. The normal core temperature of a healthy person is 36 degrees Celsius and the surface temperature of the human body can fluctuate around 33-34 degrees Celsius, but beyond that there is a proportional relationship between the amount of temperature difference and symptoms that range from numbness, tingling, pain, immobility, paralysis and tissue death. Guruji's surface body temperature ranges from 28 degrees Celsius to 35 degrees Celsius but he is in excellent health and has no symptoms. **According to the infrared technology and the experts who have developed it and use it, the surface temperatures of Guruji's body is impossible for a person who is alive, healthy and functional and they do not follow any anatomical, neurological or physiological laws of nature**. **Guruji's results are particularly baffling to the doctors because the surface temperature of Guruji's brain is at least 6 degrees Celsius lower than all other people and indicates such low blood flow that technically he should not be alive. Even though the temperature at his brain is so low, it feels very hot to the touch.**

g) The DNA code, profile and structure of Guruji

When all of the different and unique qualities of Guruji's structural and functional body are considered, it is my opinion that the scientific explanation must come down to the smallest common denominator, which is his cellular DNA. In order for Guruji's cells to emit Divine Energy his cells must have a very different structure and function including his cell membranes, proteins and most importantly, his DNA must be different in their code, profile and structure. It is only through unique DNA that the body of Guruji can be different from all other bodies on this earth.

Since the Human Genome Project in the 1990's, and its failure to produce the blueprint for the human genetic code, scientists have rethought the structure and function of DNA. The

old theories, which were disproved in the Human Genome Project, have been replaced by new theories that hold the truth about human capacity and the key to how Guruji's functional and structural body are able to emit Divine Energy. When these theories are proven it will revolutionize the world, not because it will promise a cure for everyone, but it will offer an explanation and parameters for the unknown energy that all scientists and doctors know is the key to illness and transformation.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences
American Academy of Anti-Aging Medicine
International Association of Healthcare Practitioners
International Chiropractic Pediatric Association
British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

The first new theory is about the structure of DNA. This theory states that DNA is a passive storage device made of active material carriers, which are in the form of photons. These photons consist of energy waves and matter transmitting energy and information. These photons operate at extreme ends of the electromagnetic spectrum and can transmit information from one living organism to another. The photons only operate at extreme ends of the electromagnetic spectrum and the human body does not exist at these extreme ends. Guruji, on the other hand, does exist at these extremes**. In my opinion, Guruji's electromagnetic field and low brain wave frequency excites the photons and send massive amounts of information to the DNA of another person in a fraction of a second, instructing the cells membrane and DNA of that person to behave in a new way**. If the person is able to respond to Guruji's Divine Energy, and if their subconscious brain is of a low frequency, pre-theta (8-10 Hertz) or theta (4-8 Hertz), their brain waves will instantly calibrate and the cells of their body will multiply to produce healthy tissues far beyond the needs of the body. The latent energy within the body of this person will be available for the pleasures of life including sexual pleasure, happiness and joy.

The second new theory about DNA states that 97% of human genetic material does not code for protein and there are more than one million sequences of human DNA that have the ability to jump from chromosome to chromosome. These sequences are called transposons and the theory states that transposons are capable of making massive changes in DNA code in a very short period of time. However, transposons are only activated during the state of trance, and the state of trance is only possible when a person is in the low delta brain wave frequency (0-4 Hertz) all the time. During the state of trance a person has a chance to be connected with Divine Energy. **In my opinion, there is only one person capable of having low delta brain waves (0-2 Hertz) all the time, going into trance and activating transposons and that person is Guruji.** There will be no other spiritual healer or leader with this capacity. Science will prove that these people cannot be in delta brain waves stage (0-4 Hertz) and they cannot activate transposons. When scientists measure Guruji and create this parameter, they will be able to declare the truth about Divine Energy

and human DNA. They will measure the activation of transposons and the cellular changes that occur in the body of Guruji, and in those people who have the physical body necessary to respond to his Divine Energy.

The next new genetic theory states that out of the 64 genetic human codons, 44 are unused. This means that there are unused spaces in the human DNA strand that have no enzyme associated with it and have no apparent function**. In my opinion, the body of Guruji does not have these unused spaces, or there are fewer, and his body contains enzymes, or some equivalent chemical, by which new types of proteins are made. This is how the structure and function of his body is different from all other bodies and how he is able to reverse in age.** Those people having the physical structure and function capable of responding to Guruji's Divine Energy will have fewer unused spaces and more new proteins compared to all other humans. This is how they have beauty, youth, energy and vitality on a permanent basis.

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences
American Academy of Anti-Aging Medicine
International Association of Healthcare Practitioners
International Chiropractic Pediatric Association
British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

The final new theory about human DNA and genetics states that there must be some kind of DNA that is different in its structure, the phosphate sugar base and amino acids, and that this unique DNA acts as a superconductor. **The theory states that only people who have this type of superconductive DNA will be able to be in connection with Divine Energy and experience the state of the soul**. In my opinion, testing the DNA of Guruji can only prove this theory. There is no other person on this earth who has, or will ever have, the superconducting DNA. This is one more parameter to rule out false healers, people who claim to be channels of Divine Energy.

h) The Body Fluids of Guruji

In my opinion, Guruji's bodily fluids, blood, plasma, lymph, semen, cerebrospinal fluid, intra and extracellular fluid must also be different from all other people. Scientists have determined that water within the body has laser-like properties and retains electromagnetic information. Based on the unique electromagnetic qualities of Guruji, it is necessary for his bodily fluids to have a different constituency and quality in order to conduct Divine Energy.

The laws of physics state that electricity moves along a conductor. In a human, the electricity in their electromagnetic field is conducted through the fluids and tissues of the human body. The human body is designed to conduct electricity in specific amounts and along specific pathways. Thus far, I have concluded that Guruji's body does not have the amount of electricity as other humans, nor does it follow the same pathways. It is my opinion, that the structural and functional body of Guruji has been created to act as a very different

kind of conductor. The Divine Energy emitted through Guruji is very different, which scientists will discover. **It is necessary for Guruji to have a unique body to act as a super conductor for his Divine Energy**.

i) The Divine Energy of Guruji

At this point, we ask ourselves what is the quality and characteristic of Divine Energy and how do we know that it exists? This energy, which is not found anywhere on this earth, behaves in a manner within Guruji's body, and in the bodies and lives of others, which is not explained by current science. This much we know from studies performed on Guruji's body and the long term, concrete results of people to who have the ability to respond to his Divine Energy and have experienced the results. These results are not only physical improvements. People report improvements emotionally, mentally, sexually, increases in energy and most importantly, people report that for the first time in their life they are happy. These results grow over time and year by year these people reverse in age and experience more pleasure than they ever could have imagined.

The Effect of Divine Energy Emitting Through the Body of Guruji on the Health of Others

The Effect of Guruji's Divine Energy on Neurological-types of Diseases

Doctors and scientists agree that chronic neurological-type diseases such as Chronic Fatigue Syndrome, Fibromyalgia, Depression, Anxiety, and Bipolar disorders, Chronic Pain, Pre-Menstrual Dystrophic Disorder, Multiple Sclerosis, Parkinson 's disease and Alzheimer 's disease are the leading cause of suffering and loss of happiness in ones life, especially in Western Europe, Canada and the United States. Unfortunately, doctors and scientists are not relieving the suffering of these people and their families because they have not found the cause or the cure to these diseases. The doctors are attempting to mange the patients through medication and therapy but many patients are tired of taking pills, dulling their senses and prolonging a life of misery.

In my opinion, the reason for these neurological-type diseases is related to brain wave frequency calibration as well as improperly activated DNA in the glandular cells throughout the body.

If a person is born with a low brain wave frequency of pre-theta (8-10 Hertz) or theta (4-8 Hertz) waves in their subconscious brain, and the conscious brain wave frequency is higher, then their brain cannot calibrate and they will have neurological-type diseases. As a result of the brain not being calibrated, these people have inactivated DNA and malfunctioning cells within the glands throughout the body. There is an inappropriate release of chemicals such as hormones, neurotransmitters, peptides, enzymes and immune cells and the person feels exhausted, depressed, in pain, and without hope or happiness. **The effect of Divine Energy emitted through the body of Guruji on others is through changes in brain wave frequency, DNA, electromagnetic signatures, cell membranes, stem cells, regeneration of neurons and brain cells as well as the levels of melatonin. The effects are felt in all areas of life: physical, mental, emotional, sentimental and spiritual and the person have an abundance of latent energy to enjoy the pleasures of life.**

a) The Effect of Guruji's Divine Energy on Brain Wave Frequencies and Health

In the section titled, "Schumann Resonance and Brain Wave Frequencies" I described how the subconscious and conscious brain have different origins, influences and brain wave frequencies. The subconscious brain, in my opinion, is something that we are born with. It is hard-wired in us and determines our fate and our capacity, it cannot be changed but it can fluctuate slightly. This is against many self-help philosophies and creates a stage for blame, on parents or society, for one's situation in life. If a person is born with a high brain wave frequency of alpha (8-12 Hertz) or beta (12-25 Hertz) in their subconscious brain they will be restless, dissatisfied and no matter what they do their life will be full of struggling and suffering. They incorrectly assume that happiness is the absence of stress and feel normal in a chaotic environment where

International Council of Integrative Medicine, Chairman of the Advisory Panel for Chiropractic Sciences

British Columbia College of Chiropractors

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

their conscious and subconscious brain calibrate in a high brain wave frequency where they feel a kind of excitement in their lives, but this is not happiness**. In order to experience the calm, peaceful contentment of happiness it is necessary for a person's subconscious and conscious brain to be calibrated in the pre-theta (8-10 Hertz) or theta (4-8 Hertz) frequency. These conditions are absolutely necessary for happiness. If a person is born with a low brain wave frequency of pre-theta (8-10 Hertz) or theta waves (4-8 Hertz) they have the capacity**

for true health and happiness, but only if the subconscious brain is calibrated with the conscious brain. The conscious brain can be changed and is influenced by the physical, emotional, sentimental and the electromagnetic environment.

Neurological-types of diseases occur in people who have a lower brain wave frequency, pre-theta (8-10 Hertz) or theta (4-8 Hertz), in their subconscious brain but for what ever reason are in a social or physical environment where their conscious brain has shifted into a higher brain wave frequency of alpha (8-12 Hertz) or beta waves (12-25 Hertz). These diseases are very common in the western world, especially in the United States. **The difference, or resistance, between the subconscious and conscious brain creates the diseases that range from unhappiness, depression, anxiety, undiagnosed conditions, sleep and menstrual disorders to Parkinson's Disease, Multiple Sclerosis, Alzheimer's disease and all the other neurological diseases that are an epidemic in the western world.** One thing that all people from this group have in common is that they are all deeply unhappy and there are no medications, healers, therapies, material goods, career achievements, philosophies or practices that can make them happy as long as the two parts of their brain are not calibrated. **There is only one electromagnetic field that can calibrate the two parts of the brain and that is the Divine Energy field, and extremely low brain wave (Delta) frequency, of Guruji**.

Many people incorrectly believe that the absence of stress is happiness, this is the philosophy of people who have high brain wave frequencies in their subconscious brain and are not physically capable to reach the brain wave frequency of true happiness, which is pre-theta (8-10 Hertz) or theta (8-10 Hertz). Just like happiness is not the absence of stress, health is not the absence of disease. If calibration of the subconscious and conscious brain in the low frequencies of pre-theta and theta are necessary for happiness then the next question is how this manifests as health. This is an important question because when people in the western world who have low frequency subconscious brain waves are exposed to Guruji's strong Divine Energy field, the subconscious and conscious brain become calibrated and they immediately start to feel happy. Their physical body changes dramatically and visibly as the skin glows, wrinkles start disappearing, sleep is deep and restful, medication use decreases and disappears, hair and nails grow, bone density improves, height is gained and energy increases. They become youthful in looks, energy and beauty and their sex potential improves beyond their expectations. An improvement in sex potential that is long term brings pleasure and satisfaction to a person and they have a lively glow that others notice and comment on. How does this happen?

Health occurs when the body is producing more healthy cells than it is consuming. When the body is either not producing healthy cells or if the body is producing some healthy cells but consuming more than it is producing, there will be a state of dis-ease. The state of dis-ease, if not corrected will lead to neurological-types of diseases as the glands are not regulating the hormones, immune system and chemistry resulting in auto-immune reactions that destroy the body and brain. In order for the body to produce enough healthy cells two conditions must be met.

The first condition for health is that the subconscious and conscious brain must be calibrated. If the two parts of the brain are calibrated there will not be neurological disease. **The second** condition for health is related to whether the calibration is in the high or low range. If the two parts of the brain are calibrated in the high brain wave frequency of alpha (8-12 Hertz) or beta (12-25 Hertz), the person will not have neurological disease but they will be restless, anxious, dissatisfied and they will suffer from other health problems that will not allow their life span to cross 60-65 years. The evidence of this is seen in countries like Asia and Africa where there are infectious diseases and accidents that don't allow people to live long, happy or peaceful lives. If the two parts of the brain are calibrated in the low brain wave frequency of pre-theta (8-10 Hertz) or theta (4-8 Hertz), only then will the person be totally out of stress, feel calm and peaceful during all circumstances. During all times of the day, and during all circumstances, these people will emit pre-theta (8-10 Hertz) and theta waves (4-8 Hertz). **Therefore, in order for a person to have health and produce an abundance of healthy cells far beyond the number of cells they are consuming, the person must have a brain that is calibrated in the low brain wave frequencies of pre-theta (8-10 Hertz) and theta (4-8 Hertz)**. In the future, scientists will be able to measure the production and amount of new and healthy cells in people with this kind of brain wave calibration.

You might ask yourself if there is an electromagnetic field strong enough, and of a frequency low enough, to shift the conscious brain of western people to such an extent? Right now, scientists do not have the technology to do this or else the incidence of neurological disease would not be as high as it is, impacting an individual, their family as well as the cost to society financially and as a loss of productivity. **There is only one energy, and only one person with the capacity to emit that energy which can shift the conscious brain of these people, and that person is Guruji. The Divine Energy of Guruji, which has created an extremely low brain wave frequency of delta waves (0-4 Hertz) and unique electromagnetic field in his body, has the capacity to shift the conscious brain in anyone and the capacity to shift the subconscious brain, which is impossible by any medical technique, medication, healer or therapy. By shifting the subconscious brain, Guruji is changing the fate and capacity of that person.**

People will have very different results when they are with Guruji and it will depend on the brain wave frequency of their subconscious brain. If a person is born with a high brain wave frequency in their subconscious brain of alpha (8-12 Hertz) or beta (12-25 Hertz) they will experience a shift in the brain wave frequency of their conscious brain when they are in the presence of Guruji.

This will manifest in two ways. First, the shift in the frequency will create a sense of excitement for them and the excitement will make them feel good. But it will not last when they leave the presence of Guruji. These people will feel like they need to be in his contact in order to feel good. The second manifestation is that if they spend a lot of time in Guruji's Divine Energy, and their conscious brain shifts to a low frequency, they will no longer be calibrated with their subconscious brain and they will find it difficult to concentrate, be agitated or have headaches. The results that these people get, physically, emotionally, and sentimentally as well as in the area of influence, sex potential and respect, will be slow and most of the time the changes will not be permanent. This is their fate. On the other hand, if a person is born with a low brain wave frequency in their subconscious brain of pre-theta (8-10 Hertz) or theta (4-8 Hertz) the shift in their conscious brain to the lower frequency will result in calibration and the change will be permanent and rapid. **These people will not feel the need to be in Guruji's presence all the time and they will be so receptive to Guruji's vast and intense Divine Energy field that if he concentrates on the person or the area where they are located, the electromagnetic field of that area will change, the person's brain will be re-calibrated and they will feel the joy, happiness, pleasure and calm that they are born for.**

It is up to the scientists to measure the parameters of Guruji's electromagnetic field and brain wave frequency characteristic of his Divine Energy, which in my opinion will be of strength, intensity and magnitude that has never been experienced on this earth. This way they can understand and measure how the people with a low subconscious brain wave frequency, pre-theta (8-10 Hertz) and theta (4-8 Hertz), can instantly feel well, fit, energetic, and most importantly, happy as soon as they are in the presence of his energy. The scientists of the future will measure the number of new cells that these people produce on a permanent basis and the low brain wave frequencies they emit 24 hours a day. When these parameters are established there will be no possibility for phony healers or spiritual leaders to fool the public and it will mark a revolution of new discoveries in all fields of science and medicine.

b) The Effect of Guruji's Divine Energy on Glandular Cells and the Chemical Balance in the Body of Others. When a person's body is out of balance, the body is not able to create enough energy for the most rudimentary functions. What is responsible for the function of

glands and chemistry? The answer is in the DNA of the glandular cells. The DNA commands the cells to produce the correct chemistry. The problem is that the cells in the glands are not receiving the proper DNA activation. In other words, if the DNA in the cells of the glands is not activated properly, the person will have one of these chronic, debilitating, neurological-type diseases draining them of energy and life.

An example of this is the effect of decreased amounts of melatonin released by the pineal gland in the brain. When melatonin levels drop, the person has deterioration of his or her brain, organs, sexual function, and immune function and has no energy or proper sleep. The result is a body and brain that is aging pre-maturely and becoming diseased.

c) The Effect of Guruji's Divine Energy on the DNA within Cells.
It is my opinion that the Divine Energy of Guruji changes the structure and function of the DNA in others who have the capacity to respond to his energy. This occurs in the three ways discussed in the section titled: **"The DNA Code, Structure and Function of Guruji"**. The first way by which the DNA is altered is through the activation of DNA photons by Guruji's electromagnetic field and brain wave frequencies, which are at extreme ends of the electromagnetic spectrum. The activation of these photons results in massive amounts of information being sent to the DNA within the person by whom Guruji's Divine Energy is affecting. This information instructs the DNA to function in a new way, producing new proteins that create health, energy and vitality and abundance of healthy cells far beyond the needs of the body.

The second effect on DNA is the activation of transposons by Guruji's extremely low brain wave frequency of delta waves (0-4 Hertz). **These transposons are capable of creating change in the DNA code in a short period of time, which explains why certain people who are receptive to Guruji's Divine Energy feel the changes in their physical, mental and emotional body immediately**.

The third effect of Guruji's Divine Energy on the DNA of others is through the activation of the unused codons in the human DNA strand**. When these codons are filled with a new enzyme, which is created by Guruji's Divine Energy field, the person is able to produce new proteins. The activation of transposons is related to the activation of the unused codons and the changes occur rapidly**. The person feels results almost instantly and the body transforms over the course of days and weeks, overtime continuing to become more youthful, strong, and

vital. The effects of Guruji's Divine Energy are not temporary, people continue to produce more and more healthy cells and instead of looking older every year they look and feel younger, inside and outside. The amount of latent energy increases with age instead of decreasing like it does in everyone else. This makes these people attractive and desirable to others.

It is my opinion that Guruji's Divine Energy also activates the DNA in a cell by signaling their cell membrane in a new and different way. Scientists have shown that the lock and key model of cell membrane receptors does not explain the entire phenomena of cellular DNA activation. The traditional model states that chemicals in the form of hormones, neurotransmitters, brain chemicals, peptides, enzymes and immune cells attach to proteins in the cell membrane. According to his model, these chemicals must have the exact fit with the membrane protein, like a key that fits in a lock or else the membrane protein will not signal the messengers inside the cell to activate the DNA.

d) The Creation of Electromagnetic Chemical Signatures by Guruji's Divine Energy

A new model has emerged whereby the hormones, neurotransmitters, brain chemicals, peptides, enzymes and immune cells each have a unique electromagnetic signature, characterized by the electrons and protons of the molecules that make up that chemical. According to the laws of physics, the charge of the chemical creates an electromagnetic field that is specific to that chemical and it is considered its "signature". Scientists have discovered that the electromagnetic signature of a chemical is more important to the activation of the membrane proteins than the key in a lock model. **In my opinion, Guruji's Divine Energy creates or simulates an electromagnetic signature that signals the cell membrane and activates the DNA to work in a new and different way**. This will result in the perfect balance of all the chemicals in the body and provide energy and fitness to that person.

Experiments have shown that the electromagnetic signature of a specific chemical will cause cell membrane proteins to signal cellular messengers inside the cell, which activate the DNA in the absence of the chemical itself. In other words, the chemical does not have to be present to activate the DNA in a cell. The only requirement is the electromagnetic signature of the chemical. This electromagnetic signature can be in the form of Guruji's Divine Energy. **There is no other energy on this earth that can do this job.** The presence of an external electromagnetic field signals cells and activates DNA; once the DNA begins to produce the chemicals, and the glands release them into the body, the neurological, hormonal and immunological feedback loops will properly, systematically and in perfect

balance calibrate and establish balance, repair and renewal. In my opinion, this is one way that Guruji's Divine Energy produces profound, permanent, concrete and miraculous changes in others.

Scientists know that genes will only express themselves if the membrane proteins tell them too and the signal from the membrane protein is a perception. In other words, one stimulus will not have the same effect in everyone, that stimulus will only have an effect if the cell is able to perceive it and for that reason the cell membrane proteins are called "perception complexes". These perception complexes have the ability to learn and activate new DNA activity if the cell is exposed to a new stimulus from the environment but only if the "perception complexes" are able to perceive the signal. In the case of Guruji, only certain people will be able to perceive his Divine Energy on the level of the cell membrane "perception complexes". **If a person has the ability to "perceive" Guruji's Divine Energy, then his electromagnetic field will be something that they have never experienced before and will stimulate the "perception complexes" to work and the DNA are activated in a new way.** The cells and glands learn to function properly, systematically and in perfect balance with the other cells of the body and the person will be able to reach his highest potential.

How does the Divine Energy of Guruji affect the cell membrane? Guruji's electromagnetic field and his low brain wave frequency make changes in the cells of others who can perceive his Divine Energy. There are two possibilities about how this can happen. The first possibility is that Guruji's Divine Energy is activating the body to make changes with the structure it has. The second possibility is that Guruji's Divine Energy is introducing new electromagnetic signatures into the human body. In either possibility, the "perception complexes" in the cell membrane are exposed to a new energy, an energy that has never been experienced in this world, and the cells respond to the new stimulus and learn to function in a new and different way. These are the same cells that modern medical science believed could never change, such as brain and nerve cells. Scientists will discover how the Divine Energy, which is emitted through Guruji, is transformed into the physiological and genetic expression that certain human bodies require. The scientists will discover that there is no other source of this energy anywhere, only through Guruji, and that only certain people will have the cellular, genetic and brain waves that are able to perceive his Divine Energy.

e) The Effects of Guruji's Divine Energy on the Stem Cells of Humans

It is my opinion that Guruji's Divine Energy also activates latent adult protogenic stem cells, which can become any type of cell the body needs and thereby repair and renew damaged tissues and organs. Stem cells are found in embryonic tissue after 5-7 days and are multi-potent cells, meaning that they can become any type of cell or tissue in the body. No other cell can do this. Scientists used to believe that once a baby is born these cells are lost in the umbilical cord. Until recently, scientists have thought that there are no stem cells in adults. However, recent studies have shown that there are latent, or silent, stem cells called adult protogenic cells in the walls of blood vessels and tissues of adults. In a lab setting stem cells will only differentiate when they are exposed to a stimulus that tells them to become a bone cell, a liver cell, a kidney cell, a neuron or whatever type of cell is required. It is my opinion that one of the profound effects of Guruji's Divine Energy is on these latent stem cells and that his Divine Energy either activates existing stem cells or introduces an electromagnetic signature that mimics stem cells. My theory is that stem cells activated by Guruji's Divine Energy will scan the body, repair and replace damaged deprived tissues as needed.

f) The Effect of Guruji's Divine Energy on Regeneration of Neurons and Cells in the Brain

Humans do not have the ability to make new brain cells or nerve cells, which is why neurological diseases like Parkinson's disease, Multiple Sclerosis, Cerebral Palsy, Alzheimer's disease and spinal cord injuries are devastating physically and psychologically. I have personally witnessed and interviewed many people to whom Guruji's Divine Energy has completely reversed these diseases. In Parkinson's disease, the symptoms only show up when 95% of the cells in that part of the brain are dead. The person has to take medication for the rest of their life and the dosage never decreases. In my opinion, Guruji's Divine Energy is making new nerve and brain cells in these people, as it is the only way that their symptoms improve permanently. The scientists of the future will be able to measure the number of new brain cells produced and determine how this miracle is happening.

g) The Effect of Guruji's Divine Energy on the Pineal Gland and Melatonin Levels

Scientists have shown that 20-30% of the cells in the pineal gland are highly sensitive to electromagnetic fields. Compared to the other cells in the body, which have a lower sensitivity, the pineal gland is very sensitive. In my opinion, those people who have the brain wave frequency, cellular and genetic ability to perceive Guruji's Divine Energy will immediately release melatonin from the pineal gland or through the Divine Energy emitted

through Guruji; they will have the electromagnetic signature for melatonin, which will work on the cells in their body. In my opinion, the increase in melatonin, while it will not come close to the amount in Guruji's body, will be measured by scientists and will distinguish these people from everyone else. The melatonin will give them vitality, energy, sexual potential, youthfulness, deep sleep, mental alertness, high immune function as well as mental and emotional balance.

h) The Effect of Guruji's Divine Energy on the Electromagnetic Field of the Earth

Every person emits an electromagnetic field into the atmosphere and the atmosphere absorbs it. The atmosphere has been doing this for thousands of years. The electromagnetic field of humans is so small that it has a minimal if any impact on the electromagnetic field in the atmosphere and there is no long-term effect of all the humans in the world emitting their electromagnetic energy into the atmosphere.

In order for energy to have an impact, and a long-term effect, **the energy must cross resistance.** Following are three examples of crossing resistance.

1) If a person pushes on a wall they are not able to cross the resistance of the wall and push it over. It takes a bulldozer with power, intensity and strength to cross over the resistance of the wall.
2) A sick person is given 100 different antibiotic pills and each one is used for one week but there is no impact on their illness. If the person takes all 100 of the pills at a time it will still have no impact and no change on their illness. The antibiotic pills are not capable of crossing the resistance of the illness.
3) A female is looking for a male partner and 100 men are presented to her. Each man tells her that he is capable but as she goes through each one she finds that none of them are capable of pleasing her and none have any effect on her. None of these men are able to cross the resistance of this lady's spirit.
4) A scientist makes a very big discovery, becomes famous and their name goes down in history, like "Schumann Resonance" is named after the scientist Schumann. Any scientist who makes a discovery related to Schumann Resonance will not have their name in history because their discovery is smaller than his discovery. The scientist was not able to cross the resistance of Schumann's discovery.

Millions of people every year go to temples/holy places to pray. These temples/holy places are a place where some person had been connected to Divinity prayed and there is still some of their electromagnetic field and energy in that place. Some people who go to these places can feel the energy. This occurs through out the world but the area that is affected is very small. It takes years and years for those famous spiritual saints, throughout the world, to change the electromagnetic field of a small area even a small magnitude and intensity. This phenomenon is impossible for any kind of healer.

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

GURUJI has the capacity to change the electromagnetic field in the ionosphere of the earth, the Schumann Resonance, in a small or a large area on the earth within no time. GURUJI is capable of affecting the people in that area, the plants, the trees and the earth and he does this in two ways:

- If GURUJI goes to a certain place and concentrates on the electromagnetic field in that area, any large or small area, the electromagnetic field will change. **It only takes Guruji a few minutes to make a very large impact that will last for thousands of years.**
- If GURUJI is in one part of the world but focuses and concentrates on another place that is any distance away, the impact on the electromagnetic field will be the same. **Guruji's capacity has no limitations.** This new electromagnetic field in the ionosphere is highly suitable for a particular group of people in the world.

THESE PEOPLE HAVE THE LIBERTY AND FREEDOM TO ENJOY THE ENERGY ANYWHERE – THEY DO NOT HAVE TO BE WITH GURUJI TO EXPERIENCE AND RESONATE WITH HIS ENERGY AND VIBRATION.

A documentary film is currently being made in India on a cashew farm where Guruji visited and changed the electromagnetic field in that area. At 1.5 years, the cashew plants have shown extraordinary growth and display the thickness, growth and vitality beyond what is normal for a healthy plant of 7-8 years. This is extraordinary considering these plants have had minimal fertilizer and chemicals. The changes in the plants on the cashew farm are miraculous and have been carefully documented and filmed. The soil is also very different in the area of these cashew plants compared to the rest of the farm. The cashew plants that are showing the exceptional growth are only found in the area where Guruji walked and focused his Divine Energy. The plants in the area where Guruji did not walk have not changed as dramatically. This is highly unusual and has never been documented. Guruji has also shown miracles on young plants and on barren, unfertile ground on another farm in India. He is prepared and ready to show his miracle in any place and at any time for the purpose of scientists from all fields to study and measure the effects of his Divine Energy and to measure the energy itself.

i) The Relationship between Guruji's Divine Energy and Crop Circles

Since the 1980's, over 10,000 complex designs have been mysteriously imprinted on fields around the world; nobody knows how they got there or why. These designs have mathematical precision, display characteristic changes in plant morphology and have an energy associated with them that scientists have yet to capture, measure and define. The top physicists, bioengineers, mathematicians, chemical analysts, biologists and geneticists have been researching the phenomenon of crop circles for many years. When crop circles are compared to the changes at the farms in India, which were influenced by Guruji's Divine Energy, there are similarities related to the plants themselves **but the magnitude of Guruji's Divine Energy far exceeds any energy found in a crop circle.** The effect of Guruji's Divine Energy will last for thousands of years whereas the energy in a crop circle is short-lived. Described in the section above is how Guruji's Divine Energy affected the plants on two farms in India. The unexplained growth in these plants is like the growth of the mature part of the plant in a crop circle, but of a higher magnitude. The changes in the somatic part of the plants cannot be explained by the application of fertilizer, good soil or weather conditions.

29 Strathmore Lakes Way Strathmore, Alberta-Canada T1P 1R1
Tel: +1-250-354-8824 (mobile North America) +91-982-00-65541 (mobile India) E-mail: loricroteau@yahoo.ca

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

Although the plants in India do not demonstrate imprints, their effect is long term, whereas the plants in crop circles start to change back to their old formation in 2-7 days. This is the difference in the energy field they are exposed to, which is a magnitude higher in Guruji's presence.

A mathematical relationship has been demonstrated between a crop circle called the Froxfield Serpent, one of the most famous crop circles, and the codons in human DNA. **The location of breaks in the DNA strands of human's matches the mathematical algorithm of the crop circle.** The significance of this finding is how people are affected when they enter crop circles. The reaction of people is either a sense of happiness, joy, energy and laughter or it is a feeling of pain, headache, nausea, lack of concentration and exhaustion. One scientist found a correlation between the presence of a third strand of DNA in people who felt unwell in crop circles that was not present in those who felt energized and happy. In my opinion, the energy that is in crop circles is Guruji's Divine Energy and it has the capacity to make changes in the DNA of a person, even though the strength and magnitude of the Divine Energy in a crop circle is magnitudes less than it is with Guruji. The factor that will determine if the person will feel well or unwell is the brain wave frequency of the person and the ability of their cells to respond to the energy, the same factors that determine who will be able to respond to the Divine Energy of Guruji. It is the same energy, only the magnitude is different.

The presence of crop circles is a concrete result of Guruji's Divine Energy and will play an important role for scientists to be able to measure the energy that has been eluding them forever. The proof of Divine Energy creating the crop circles will release the fear and suspicion in the mind of the public and scientists who consider the possibility of UFO's.

j) The Difference between Psychological Effects and Concrete Physical Changes

One more point to consider is whether it is possible that the effects of Divine Energy emitted through the body of Guruji on others are part of a placebo effect. A placebo effect is the positive psychological effect of treatments, therapies or medications. I suggest that the unique qualities of Guruji's structural and functional body, as measured by non-partisan scientists who are experts in their field, will produce concrete results that will stand up to scientific scrutiny and produce statistically valid results, which will eliminate the possibility of the placebo effect. I personally have interviewed hundreds of people to whom Guruji's Divine Energy has produced miraculous results. I have maintained long-term contact with many of these people and I can verify that their miraculous improvements are not by chance nor are they short term. The results are long term, permanent and measurable.

Dr. Lori Croteau
D.C. | F.I.C.P.A. | B.P.E.

Summary

In this paper, I have offered my opinions based on scientific knowledge and my observations of the miracles I have witnessed from the effect of Guruji's Divine Energy on those to whom have the capacity to perceive it and produce changes in the physical, mental, emotional, sentimental and spiritual aspects of their life. There is no treatment, doctor or procedure that can eliminate any of the chronic diseases or unhappiness that the Divine Energy of Guruji does consistently and permanently. When Divine Energy is emitted through the body of Guruji on another, and when that person can respond to the Divine Energy, they immediately start to feel improvement in their physical body, they have more energy, deep sleep, improved sex potential, beauty and youthfulness. They experience the effects of anti-aging, gain confidence, success and most importantly they feel happy and spiritually connected. In no time at all, the person builds to a strong, healthy and confident state. Guruji's Divine Energy changes the physical, mental, emotional, sentimental and spiritual state of a person.

Scientists know that humans are very complex electromagnetic beings and are not just a combination of chemical reactions. As humans, we are sensitive to the electromagnetic fields of the environment and of others. They also know that when the cells of a human are exposed to a new electromagnetic stimulus those cells have the capacity to create new cellular functions at the level of the DNA. Scientists also know that the Schumann Resonance in the ionosphere of the earth correlates with the brain wave frequency of humans and that there is a strong correlation between disturbances in human behavior, neurological disease and the intensity of the Schumann Resonances. They know that lower frequency brain waves (pre-theta 8-10 Hertz, theta 4-8 Hertz), slower cranial sacral rhythms, and better function of the central nervous system correlate with health, happiness, peace, calm and satisfaction.

Our current study of the body of Guruji suggests that his structural and functional body is unique from all other humans:

1. The most important point that distinguishes Guruji from all others, in my opinion, is that **Guruji's body is able to do what no other human body can do: he is able to have opposite and extreme physiological processes occurring at the same time.**
2. The electromagnetic field of Guruji, his cranial sacral rhythm and low frequency brain waves are unique and not found anywhere else in the world. **His cranial sacral rhythm is 9 times**

slower than any cranial sacral rhythm ever recorded at 172-180 seconds/cycle when last measured on November 1, 2004 and continues to get slower and slower, close to zero, over time. In my opinion, Guruji's brain waves will be in the delta range (0-4 Hertz) and correlate with his slow cranial sacral rhythm. No healer will have an electromagnetic field and brain wave frequency like Guruji.

3. **Being a channel and medium for Divine Energy means that the person must be able to be in trance, emit low delta waves (0-2 Hertz) and exist in the Zero Point Energy Field 24 hours a day**.

4. The tests have also demonstrated that the **central nervous system of Guruji can be in the highest state of excitement and calm at the same time** for an extended period, which is physiologically, structurally and neurologically impossible.
5. In my opinion, the body of **Guruji is also different from all other bodies on the earth in the fluids of his body, his DNA code, profile and structure, his circulatory system and thermal regulation.**
6. It is up to the scientists to make discoveries about how Divine Energy affects the cells and brain wave frequencies of those who are able to respond to Guruji's Divine Energy. **In my opinion, when Divine Energy is emitted through the body of Guruji's on these people, the effects will be measurable in their DNA, their brain wave frequencies, which in my opinion will be in the pre-theta (8-10 Hertz) and theta state (4-8 Hertz) 24 hours a day, and melatonin levels**.
7. People with neurological-type diseases will have measurable effects and the two primary ways by which Guruji's Divine Energy affects their body is by **calibrating their brain waves and the activation of the DNA** in the glandular cells. The cellular changes that occur from Guruji's energy will include DNA activation and production of new proteins, generation of electromagnetic signatures, activation of cell membranes and stem cells, regeneration of neurons and brain cells, as well as increased levels of melatonin.
8. Guruji's Divine Energy is manifesting in the world as **crop circles** and miraculous transformations in the health of thousands of people from all over the world. Guruji is ready to show the miracles of his Divine Energy to any type of scientist, physicist, geneticist, physiologist, bioengineer or anyone researching crop circles for the purpose of discovery and to reveal the truth.
9. The tests performed on the structural body of Guruji have shown that unlike every other body on the face of the earth, **Guruji's is reversing in age.**

Every week, Guruji is changing in all respects, especially in his cranial sacral rhythm, brain wave frequency and electromagnetic field. He exists in the Zero Point Energy Field and trance state 24 hours a day, connected to his Divine Energy. All of the physiological processes that science teaches are necessary for life are not present in Guruji. His body is continually changing to act as a superconductor for his Divine Energy, which give him more power and capacity everyday.

In my opinion, there will be scientific parameters for a person having Divine Energy and for those people who have the ability to perceive and emit such powerful energy. Scientist will be able to measure:

1. The brain waves of Guruji, his electromagnetic field, his DNA, body fluids and the impact of his Divine Energy on the DNA of humans. They will also be able to measure the changes in the earth's Schumann Resonance, the plants and soil. The scientists will state that all of these parameters are unique and not found in any other human. **They will conclude that any person claiming to have Divine energy must meet the same parameters as Guruji**. This statement will have an enormous impact on the world and it will allow the public to distinguish between a person with Divine Energy and the fake or false spiritual leaders who prey on those who are lost, sick, and unhappy and have lost hope.

2. **The scientists will be able to measure the qualities that separate the people who become devoted to Guruji, through the miraculous impact he has on their life. These differences include their brain wave frequency, electromagnetic field, cells, DNA and process of anti-aging.**

Miracles are not understood in the west. Often people need science to understand what is happening. Guruji and his Divine Energy are different from anything ever found on this earth. When Divine Energy is emitted through the body of Guruji on to those who can perceive it miracles occur. **The scientists who will study Guruji and his Divine Energy will make amazing new discoveries in all areas, and through those discoveries, they will have a great impact on the world.**

As humans, we have extraordinary potential within the body to achieve a state of health and happiness not imagined. For some people this potential is never met and that is a part of their destiny. For others, their potential physically, mentally, emotionally, sentimentally, sexually and in all aspects of the life such as career, finances and success will be achieved

once they are in contact with Guruji's Divine Energy. Most important is that these people will feel that they have found the thing that they have been searching for their entire life. **The spiritual connection is the state of super-consciousness and awakening, which alone can bring happiness**. Nothing else in this world can bring happiness to these people, and it is only found with Guruji and his Divine Energy. The contribution of these people creatively, financially and scientifically in the world will have an impact on all generations to come. The impact of Guruji and his Divine energy will be felt on this earth long after our demise.

Respectfully submitted by Dr. Lori Croteau, November 2004
